

Day 4 - LinkedList Merge and Remove Duplicates

ITSRUNTYM

#	Problem Name	LeetCode #	Difficulty	Key Points
1	Merge Two Sorted Lists	21	Easy	Merge 2 sorted lists using dummy node (iterative/ recursive).
2	Merge k Sorted Lists	23	Hard	Min-heap or divide & conquer merge k lists.
3	Merge In Between Linked Lists	1669	Medium	Replace a segment of one list with another list.
4	Merge Nodes in Between Zeros	2181	Medium	Sum values between zero nodes.
5	Linked List Cycle II	142	Medium	Not merging, but pointer mastery; helpful for safe merges.
6	Insertion Sort List	147	Medium	Sort and effectively merge nodes as part of sorting.

7	Sort List	148	Medium	Merge sort for linked list (merge logic inside).
---	-----------	---------------------	--------	--

#	Problem Name	LeetCode #	Difficulty	Variant
1	Remove Duplicates from Sorted List	83	Easy	Keep one occurrence.
2	Remove Duplicates from Sorted List II	82	Medium	Remove all occurrences of duplicates.
3	Delete Duplicates from Sorted Array	26	Easy	Array version — good warm-up.
4	Delete Duplicates from Sorted Array II	80	Medium	Array variant where at most two duplicates allowed.

#	Problem Name	LeetCode #	Difficulty	Variant
1	Remove Duplicates from Unsorted Linked List	1836	Medium	Remove all values that appear more than once.
2	Linked List Components	817	Medium	Related — grouping values (set usage).

3	Intersection of Two Linked Lists	160	Easy	Not dedupe, but also pointer cleanup and uniqueness.
---	----------------------------------	---------------------	------	--
